25X1A

MEMORANDUM FOR: [redacted] Chairman, Advisory Committee, NPIC  
FROM: Chairman, Secretariat, NPIC  
SUBJECT: Proposed J 84-63 (GMAIC Production Facilities)  
REFERENCE: Request from [redacted]

25X1A

1. Pursuant to your request for more background on available materials bearing on the new GMAIC requirement on 26 missile production facilities, I have drawn up the following facts:

- a. There are P.I. reports on at least 18 of the facilities. These contain some measurements and line drawings which could be lifted and brought to a common scale.
- b. There are line drawings for 50% of the facilities. These would require review for changes or additions, but many would probably be slight.
- c. Comparative coverage is available for most of the facilities.
- d. As an overall "guesstimate", 60-70% of the required materials are available. These, however, would require reworking to produce a consistent report.
- e. Finally, it would probably require one full time P.I. to meet the 15 June deadline.

25X1A

2. The above facts were furnished by [redacted] CIA/PID/MEB, who has worked very closely with the GMAIC Production Working Group.

25X1A

3. If further questions should develop during your intended discussions with [redacted] I would suggest calling [redacted] directly, on [redacted]
